```

jab user footer ke kisi bhi link pe click kr rha hai tab underline aa rha hai please underline nhi aana chahiye

Underline aa raha hai kyunki tumne har `<a>` tag me `hover:underline` class laga rakhi hai.

Agar underline bilkul nahi chahiye (hover pe bhi nahi), toh simply us class ko hata do ya override kar do.

✅ **Fix 1 (best): remove** `hover:underline`

```
</> JavaScript
```

✅ **Fix 2: explicitly disable underline**

Agar future me koi global CSS underline laga raha ho, toh yeh use karo:

```
</> JavaScript
```

⚠️ **Important note**

Tailwind me:

- `underline` → underline force karta hai
- `hover:underline` → hover pe underline
- `no-underline` → underline remove karta hai

Quick replace trick

Tum pura file me replace kar sakte ho:

 ChatGPT 

Log in

Sign up for free

hover:underline 

Replace with:

hover:no-underline 

Agar phir bhi underline aa raha hai, toh ho sakta hai kisi global CSS (jaise `a { text-decoration: underline; }`) se aa raha ho — us case me bata dena, main uska proper fix bhi de dunga.

This Website belongs to Cabinet Secretariat, Government of India

ye wala ekdam stright aana chahiye but abhi wrap ho rha h

Abhi text wrap ho raha hai kyunki us container ko full width mil rahi hai aur Tailwind default me text wrap karta hai.

Tumhe isko **single line (straight)** rakhna hai → uske liye `whitespace-nowrap` use karo.

 **Fix**

Is div me class add karo:

 JavaScript 

```
<div className="text-left text-gray-300 text-base whitespace-nowrap">
  {copyrightText}
</div>
```

💡 Agar mobile pe issue aaye

Dhyaan rahe — `whitespace-nowrap` lagane se chhoti screen pe text overflow ho sakta hai (screen ke bahar nikal jayega).

Agar tum chahte ho:

- desktop pe straight rahe
- mobile pe wrap ho

toh responsive use karo:

JavaScript

```
<div className="text-left text-gray-300 text-base md:whitespace-nowrap">
  {copyrightText}
</div>
```

🔥 Optional (overflow handle karne ke liye)

Agar bilkul safe chahiye:

JavaScript

```
<div className="text-left text-gray-300 text-base md:whitespace-nowrap overflow-hidden text-ellipsis">
  {copyrightText}
</div>
```

Agar tum chaho main isko footer ke layout ke hisaab se perfectly align bhi karwa deta hoon (kyunki abhi yeh grid ke andar thoda awkward behave kar sakta hai).
